                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Neb.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Kroph) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position 4 + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gft, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /product="hypothetical protein Rv2191"

/gote="Similar to Mycobacterium tuberculosis hypothetical ABC transporter ATP-binding protein RV3236c or MTC73G12.08 SW:YN26_MYCTU (P71886) (697 aa) fasta scores: E(): 0, 76.3% id in 697 aa. Shares similar domains with many ABC-type transporters e.g. Streptomyces roseofulvus ATPase component of putative ABC transporter fnnD TR:068910 (EMBL:AF088302) (524 aa) fasta scores: E(): 8.4e-14, 31.5% id in 495 aa and Synechococcus SP:NHTD_SYNP7 (P38046) (274 aa) fasta scores: E(): 1.6e-12, 34.8% id in 198 aa. Previously sequenced as TR:032971 (EMBL:298741). Contains hydrophobic, possible membrane-spanning regions. Contains 2 Pfam matches to entry PF000005 ABC_tran, ABC transporter. Contains 2 x PS00017 ATP/GTP-binding site motif A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /transl_table=11
